

Architecture Dashboard

Compute	Private application tier across 2 availability zones
Database	Managed relational DB with HA and automated backups
Storage	Object storage for large files and exports
Networking	DNS → edge/load balancer → private app → private DB
Security	IAM, least privilege, TLS, encryption, firewall boundaries
Availability	Multi-zone application deployment + health checks
Scaling	Horizontal auto-scaling + database optimization/read replicas
Recovery	Assumed RPO 15 min / RTO 1 hour

Evaluation coverage: compute • database • storage • networking • DNS • security • backup • scalability • data flow • trade-offs
